

Skinning Machine

Operator requirements	1 person
Throughput rate	30 to 150 fillets/min depending upon the version
Power consumption	52 1.5 kW 52 DS 2.0 kW
Water consumption	abt. 25 l/min
Dimensions	abt. 2.15 x 0.85 x 1.12 m
seaworthy packaging	abt. 2.30 x 1.0 x 1.49 m
Weight	52 abt. 320 kg net abt. 490 kg gross
	52DS abt. 348 kg net abt. 520 kg gross

The BAADER 52 can be combined with all BAADER whitefish and redfish filleting machines.

The BAADER 52 operates both as normal skinning machine according to the time-tested peeling procedure which retains the silver film on the fillet, and as deep-skinning machine BAADER 52 DS which removes the skin together with the fatty layer between the skin and the muscular tissue by means of an oscillating blade; the thickness of cut is adjustable. This method is e.g. used for salmon, saithe, merluza, Alaska pollack, etc. Beyond this, there are two special versions available for tuna and salmon. They remove the fatty tissue between the upper and lower muscular cord of the fillets automatically during the skinning process.
